COUNCIL FIDDLES WHILE PETCH BURNS

By John Driscoll

It appeared, as The Ring went to press earlier this week, that UVic, because of the expenditure of building the University Centre, will not get immediate funding for the much-needed music wing.

Reliable sources within the provincial government said the $8 million cost of the centre, now under construction, is the main stumbling block against providing funds for the music wing.

The Universities’ Council, which handles all financial grants to UVic, UBC and SFU from the provincial government, has recommended immediate approval for a library-processing centre at UBC ($2,430,000), a multi-purpose building at SFU ($7,475,000) and 1888/60 toward the third wing of the Clearihue Building at UVic.

The Clearihue wing is already built, the money being borrowed from the fund for the University Centre which was received before the Universities Council came into being two years ago.

The author of the report to the council excluding the music wing from projects requiring urgent funding is David Hellwell, a man appointed to the council by Education Minister Dr. Pat McGeer in March.

In an interview Friday, Hellwell said it is his personal opinion that UVic should have used the money for the university centre to build the music wing and the fourth floor of the Clearihue building, another urgently needed facility.

“The university centre is a luxury item,” he said. “It seems to me that UVic had the money for the music wing and spent it on the centre. I’m concerned about UVic’s priority ratings.”

Hellwell said to me that at a time when the economics of the province have changed there should have been a re-ordering of priorities.

UVic President Dr. Howard Petch was scheduled to meet McGeer yesterday in a last-ditch attempt to convince the minister that funds are urgently needed now for the music wing.

In reply to Hellwell’s statement Petch said, “if he called the university centre a luxury item then he really doesn’t know what he’s talking about.”

Petch said the university centre has been a priority item at UVic since 1972.

“At no time did the council question that building,” he said.

“We were never asked to present the case for the university centre. The money for the centre was given to us specifically for that purpose before the council was formed and I wonder why it’s being brought up now.”

Petch said it was the same as asking SFU why they were asking for an education complex when they built a huge administration building a few years ago.

Petch was upset by the “reversal” of Universities Council policy regarding the music wing, which was approved by the council in March of 1976 and has been ready for tenders to be called since December.

He feels UVic has an “overwhelming case” in favor of immediate funding for the project.

Interviewed prior to his meeting with McGeer he said he hoped the minister would “look at our case in an objective fashion. I’m convinced that if he does, it will be approved.”

Projects not listed on the top priority list will be placed on a five-year capital projects plan and each new building must then go through an elaborate chain of approval.

Petch described the new system as a “snakes and ladders game which could cause delays of six months to a year before a project is finally approved.”

This is why he feels it is so important to get funding for the music wing now.

“Because if we don’t get it now it will mean there will be nothing ready before the 1979-1980 school year,” he said. “Even if it’s approved now it won’t be ready until 1978.”

Under the system set up under the new B.C. Educational Institutions Capital Financing Authority, approval must be given to each new building by the council, minister of education and the treasury board.

When the building is ready for tender approval must be given again by the minister and finally if tenders come in much higher than the estimated cost of the building, the entire process must be repeated.

“I’ve had several members of the Universities’ Council tell me not to worry because the music wing will be approved in March,” said Petch.

“They tell me it will mean only a few months’ delay but I don’t believe that.”

“With inflation the tenders could come in high, causing the whole project to go back to square one. If it’s approved now we won’t have to go through all these procedures which are likely to take another two years.”

Hellwell suggested that UVic could consider raising funds through other means than

WHO’S TO BLAME FOR ABORTED MEET ON MUSIC WING?

Dr. Pat McGeer, the man who came to dinner, feels he’s been unfairly accused of “disappearing on short notice” from his meeting with UVic officials.

A spokesman for the minister’s office said it was “unfair” of the university to place the blame on the minister for the short meeting.

The meeting was arranged to discuss funding for the music wing of the MacLaurin building and UVic president Howard Petch had prepared a presentation for McGeer.

He didn’t get a chance to present a submission as McGeer announced after lunch that he had to leave in 10 minutes.

“As far as the minister was concerned all

the provincial government for building projects. 

"I'm not being naive and I realize there's no way you can raise raffles and things, but there's nothing stopping UVic from raising money," he said.

Helliwell said he wrote his recommendations to the universities council as a private individual, and the council was clear that it was a personal opinion.

Helliwell said he was totally aware of the problem with the music department at UVic and totally sympathetic to it.

"It's all an Uvic's priority list but whether it's at the top of the list among the three universities remains to be seen," he said.

When discussing the issue at the Oct. 6 Senate meeting Petch was highly critical of the logic behind Helliwell's report and the criteria set out by him for building projects.

Petch said Helliwell's report seemed to suggest that the Universities' Council intends to move beyond its powers and "assign" roles to the universities.

"This is clearly the prerogative of Senate and Board of Governors," he said.

"My report is not intended to usurp the power of the universities," said Helliwell.

"It's not very expensive to have each of the universities go their own way without any concern about what the others are doing.

"There's a limit to how much money can be spent on universities.

One criterion listed by Helliwell stated that a building project must not, by its nature, affect the budget very much this year.

"If this convention were strictly applied, no building could be constructed because any new building must make a commitment on operating budgets beyond the next fiscal year unless they are planning on having no heating, lighting or cleaning in these buildings.

Helliwell said the Senate was recommending that the Winereg report on university education in non-Metropolitan areas of British Columbia, if approved, be referred to the Provost in Victoria. The Senate's request could change the future direction of the universities, and thus the need for certain types of buildings.

"If the province accepts the Winereg report, a role will be set for UVic," he said.

Petch, an outside worker, chairman of the council, feels differently.

"In my own opinion that report will have no effect on the enrolment of the three coastal universities," said Armstrong.

"The Winereg report clearly is directed at the future of university programs in the Interior, not at the future of the three coastal universities," said Petch.

Armstrong said he was aware of the problems with the facilities for music at UVic.

"I realize that a building has been needed for years," he said.

"You need some sort of isolation for a Music Department and I know the difficulties with the present situation," he added.

He said the fact that the music wing was not one of the projects recommended for urgent funding, really meant a delay of only a few months.

"The music wing sits high on the priority list at least for the next few years," he said.

"If they know they're going to approve it in March why not let us get on with it," said Petch.

"Construction costs won't be very far off. If you go to March so it won't affect the budget very much this year.

"And a few more months can make a hell of a difference." Armstrong said the minister could reject the council's recommendations. 

"When you come down to it, the minister has the power to do what he likes."

The 10-member council, originally appointed by the former NDP government, has four members with terms that ended Oct. 15 and five with new terms.

Wilson said he is looking at making new appointments or re-appointing the present members.

Armstrong said he does not expect the minister to make wholesale changes.
The demand for parking permits on campus has "stymied right down" according to Tom O'Connor, assistant coordinator of Traffic and Security. O'Connor said permits have been issued to everyone who wants one and there is no longer a waiting list. The parking lot is "in use by 10 a.m. on Tuesdays, Wednesdays and Fridays and O'Connor said lots were surveyed at 6 a.m. daily. "At times during the peak periods there is very little 150 space available," he said. He added that sometimes there are less than 60 feet left in the main campus. O'Connor feels the bus pass system for students who has close to 1,000 subscribers has assisted in the parking problems. In addition more students are not driving cars this year; he added that UVic and Seaton have more permits parking than parking spaces, but the system "b) working out very well," said O'Connor.

A request by F.B. Cahill of the Victoria chapter of the League of Independent Canadians, to speak on faculty citizenship at a meeting of Senate was turned down at the October Senate meeting. Senators felt that to permit Cahill to speak without knowing more about his topic would be setting a precedent. Besides, they pointed out, even a well-known university president would require the faculty's acceptance in principle of a proposed hiring policy which is then put to the faculty for approval. The new hiring policy was scheduled to go to the Board of Governors at the Oct. 18 meeting.

Dietrich Bertz (Special Collections) has completed the first English edition of the elusive and important anthropologist Franz Boas, a collection of mythological texts of Pacific Northwest Indians. The translation was prepared by the B.C. Indigenous Language Project and is to be published by the National Museum of Canada as part of their B.C. Book Project. "It is also an ultimate tribute to Dietrich's work."

A paper on "The Victorian Religious Subculture" was delivered by Dr. Lionel Adele (English) at the recent Fifth Conference of the Victorian Studies Association of Western Canada at the University of Saskatchewan, Saskatoon.

Dear Sirs:

As a member of the University Council I first received your publication, and I must thank you for sending it to the University. It seems to me that the term has expired.

Today's Ring (September 27, 1976) was especially welcome, as without Victoria College I should not have been able to receive an education. As one of your contributors says, so many of us were from poor homes. In my case, Miss Cann got Mr. Elliott to obtain a special bursary for me in 1929 from one of the service clubs, and thereafter I was able to obtain scholarships and loans. I know, of course, all the people in your picture of the 1929 Student Council, and I should like to know what has happened to them.

There was a brilliant faculty in 1929-30, with Miss Cann, Miss Humphrey, Mr. Elliott, Walter Gage, Jeff Corinthia, Machine Sanders, Morgan, Mr. Farr. I remember all these as excellent lecturers. How lucky we were!

Yours truly,

Dorothy Fraser
(Dorothy Johnson 1928-30)

Sir:

Thank you very much for your article on staff opinion. This is the first time I have found it worthwhile (as opposed to mildly interesting) to read The Ring; you have finally done a genuine service to the university. Maybe this will help to create the sense of community some staff (and others) feel is lacking. It will help me guard against attitudes I have sometimes been guilty of.

A few comments. "The faculty seem to feel we're there to serve them," says one. There is some justification for that feeling: given what a university is, inside work can hardly be separated from the energies of faculty and students for teaching and research. Some of us are "in the staff" in fact directly carry out educational and research functions, and faculty have been known to do so..." "...seeing that one is often called upon, filled in from the one's faculty to ensure its success." They are urged to contact him soon at local 4788.

A series of 10 lectures about "Industry and its Impact" in the first few months of 1977. However, according to Dr. Green Mason (Physics), the program is "an important feature of the Faculty of Technology to ensure its success."

Dr. John Greer Nicholom, chairman of the Fine Arts, Business and Humanities, undergraduate Institute of Arts at McGill University, will give two free public lectures Oct. 27 at 2:30 p.m. and 7:30 p.m. in Victoria Hall. The "Sodality and Wicce," will be presented on the principle of Slavonic and Oriental Studies. How, says "..." is to establish a "Russian Looks at the World..." at 9 p.m. in Carson 163. This lecture is the second in the current series of "Russian Looks" lectures. Formerly a prominent Slavist who has travelled widely in Russia and Eastern Europe. He was deputy head of the research department at the Institute of the History of the U.S.R. in Germany and has written numerous scholarly articles on Russian themes. Nicholas is also the recipient of several Canada Council awards. He served in the intelligence corps of the British Army..." 21 St. 4 30 p.m. in Cortell 138. Oleno, who joined UVic as an assistant director of the U.S. University Affairs, Canada Council, on Oct. 21 at 3:30 p.m. in Cortell 138. Oleno and fourth-year students considering graduate school and graduate students interested in the topic are urged to attend. The talk is being sponsored by the Graduate Student Society.

The Ring - Page 3, Oct. 20, 1976
Why is Dr. Trevor Trust smiling so much these days while most everyone else is frowning?

Trust and his small and hitherto underated Department of Bacteriology and Biochemistry have been housed in obscurity deep within the campus slums (the army hut area) these past years, the only Arts and Scienceistry have been housed in obscurity deep with envy at all those other scientists.

His department is suddenly thriving. His research findings to the government has never found any traces of furunculosis, a disease that affects salmon and trout, and he is gearing up more and more to study diseases affecting local fish species and to search for preventative methods.

"There are a lot of diseases that can affect trout and salmon. Some commercial fishing farms can tolerate up to an 80 per cent kill from diseases and still make money." If methods can be found, he said, these will have significant impact on B.C.'s economy, which revolves a great deal around the fishing industry.

The ways in which fish are affected are just not known.

Trust said the emphasis on research grew out of the department's history and from the work of the late Dr. Alex Wood, founder of the department in 1969, and of former faculty member Dr. David Groves.

Trust and his colleague, Dr. Tom Buckley, plan to extend their research to grass carp, because of the interest of some Asian countries into introducing these fish as a source of protein.

Bacteriology and Biochemistry is expanding into the connecting hut, occupied until earlier this month by History in Art, which has moved to the Sedgwick.

This is providing much needed lab space for both research and the increasing student numbers (now at 300).

As with any other huts, this department's quarters look gray and lifeless from the outside. But step inside and there is a maze of offices and labs enveloped in the distinct smell of disinfectant. Instructors and students are bustling around in white coats, electronic equipment is everywhere, and there are tanks both inside and outside containing swarms of fish.

At the same time, workers are busy renovating the place. "We're updating for the first time since we were established." Fish are only one area of study, especially since the department now has the faculty to diversify its research and teaching.

This is reflected in recent appointments. These include Dr. Jack Nichols, a Canadian molecular biochemist, from Duke University in North Carolina; Dr. Bill Kay, a microbial biochemist from the University of Saskatchewan; and Dr. Rod Lam. His later research has worked at the Salk Institute, the Australian National University and the University of Alberta.

The department is also making its expertise available to local hospitals. Dr. Sheila Berry teaches a course in microbiology to 150 nurses, as well as to other students.

"The hospitals have found that this is very beneficial to them."

Trust said the name of the department is out-of-date, and it will soon be changed to Biochemistry and Microbiology.

Trust was with the department soon after it was established, coming straight from Australia, where he had studied and researched into the connecting hut, occupied until earlier this month by History in Art, which has moved to the Sedgwick.

Holmes and Rahe developed a scale for measuring the stress caused by changes in an individual's life. In a questionnaire testing of 394 varied subjects, each subject was asked to rate a series of 43 changes such as a spouse, personal injury and change in work, according to the relative degree of required adjustment. Assigning a mean stress value of 50 to a marriage Holmes and Rahe discovered that consensus was high concerning the relative order and magnitude of events in daily life. The validity of their scale has been confirmed in other studies.

Foster has recognized the Social Readjustment Rating Scale can be used to assign life stress values to those events commonly occurring during a disaster.

"What I have done really is to take the work of Holmes and Rahe and extend it into another area," explained Foster.

Once Foster had a scale to measure the stress associated with an event he was able to develop a formula to find the total stress for a calamity. There were problems. For example since death precludes adaptive behavior, how do you assign meaningful stress value to an individual killed during a disaster?

In his study Foster assigned a stress for people killed equal to the stress which would have been experienced had the individual lived and his or her spouse been killed.

The fact that families are larger in developing countries and that a slightly smaller percentage of people are married in such countries must also be taken into account.

Foster said the number of close friends a person has is also the subject of considerable study. He chose an average of three friends involved in disastrous events.

Disasters, however, cause stress by their impact on the infrastructure and through the social disruptions that this causes.

Foster has developed a scale of infrastructural stress values ranging from Intensity One, a very minor incident to Intensity 12 the "future textbook example. All facilities completely destroyed, often little left to salvage. Life expectancy may be years. Survivors become life-long curiosities."

All facilities completely destroyed, often little left to salvage. Rare survivors become life-long curiosities."

This scale is based on the Holmes and Rahe scale as well as on a search into disaster literature and discussions with individuals involved in disastrous events. Foster said his scale could be improved by extensive questioning of disaster survivors.

Foster has developed two formulae to assign total stress values to any event, one which can be used to calculate the magnitude of a car accident, and another which can be used to calculate the magnitude of a disaster.

Foster has also clearly differentiated between "adverse events" which range from minor events (1 to 3 on the scale) "calamities" (4 to 7 on the scale) and "catastrophes" with a range of 7 to 9 on the scale.

"Disasters" from 5 to 7 on the scale include the Mendi, Managua, Nicaragua earthquake of 1972, (7.9) and the 1971 mass poisoning in Iraq from grain treated with mercury fungicide (7.4).

The scale reserves the definition "major catastrophe" for events of a magnitude of more than 9. "The scale is open-ended, reflecting both the global population explosion and man's penchant for nuclear weapons," said Foster.

Of the major catastrophes Foster has plotted the top five are the Second World War (11.1), Black Death (10.9), First World War (10.4), Stalin's Great Purge of 1936-38 (10.2) and the earthquake that devastated Tokyo in 1923 (9.1).

Some others he has plotted include the atomic bomb explosion at Hiroshima (8.2), glacier avalanche at Yungay, Peru in 1970 (8.1), the sinking of the Titanic (8.1), and the Black Hole of Calcutta (8.0).

The recent China earthquake reached 9.0 while the La Paz hurricane destruction was 8.8. Foster feels his event magnitude scale has obvious limitations, but is valuable in disaster research as well as in making rapid comparisons with earlier events with which people are more familiar.

Since his scale is open-ended it could be used, at least theoretically, to measure the disaster magnitude of the end of the world itself.

The only problem would be finding someone to measure it.
A lack of money accounted for a fair number of students not showing up for registration after they were accepted at UVic, according to a survey conducted by Administrative Registrar Gordon Smiley.

Some 24.7 per cent of those who responded to the survey gave money as the reason for not coming. However, the largest percentage, 27, decided to go to another university or college.

Smiley initiated the survey after 690 of 2,900 new admissions to UVic became "no-shows" at registration.

He sent a questionnaire to 650 of these students, excluding those accepted from outside North America, and got back 296 replies, a return of about 46 per cent.

"The province's economic situation this summer obviously contributed to a fair number of no-shows," said Smiley after examining the results last week.

"It appears that many students are staying close to home to reduce their expenses," he said. "The number of students going to out-of-province universities is higher than I would have expected."

The results also showed, he said, that a large number who applied to at least two universities did not bother to notify the one they decided not to attend.

Of the students who replied, 94 indicated they intended to apply at UVic again next year. Smiley said this could mean a jump in first-year enrolment in 1977.

Another 10.1 per cent are attending community colleges.

Results indicated that the housing situation in Victoria didn't have much to do with students' decisions not to attend UVic. Only 4.7 per cent of the replies listed "lack of housing or residence" as the reason for not showing up.

Students who applied late and those who had to wait a long time to find out what transfer credit they were going to be awarded contributed for 9.1 per cent of those who didn't show up.

Smiley said the delays in awarding transfer credit will be reduced in future as the admissions office builds up precedents in the area of transfer credit for non-B.C. institutions and is able to process applications quickly rather than referring each case to individual departments.

Replies to the questionnaire were received from 180 people who were accepted in first year and 116 people in other years. Other reasons for not showing included such things as a lack of transfer credits and a lack of evening courses.

Some students got a job after being accepted at UVic while others replied that they decided to travel rather than study. Uncertain future plans, poor health, programs not available and the fact that a person had moved were other reasons given for not coming to register.

---

Handling new lasers are students Ralph Saxer, left, and Gary Copeland.

### Lasers spark sailing boom

UVic's tiny navy has been expanded with the purchase in the spring of two lasers, and interest in the Sailing Club has risen dramatically.

At the first meeting of the club in September more than 60 people turned out. Many people are taking advantage of an intramurals learn-to-sail program sponsored by the athletics and recreational services office, with instruction at Oak Bay Marina under sailing club director Dave Severide.

About 30 people in September purchased activity cards for $15 for unlimited use of the lasers and four mini-sails owned by UVic.

Now the club plans to use members of its racing team as instructors to offer additional courses so to raise money to pay for the lasers and for regattas against other universities and clubs.

"Six people have volunteered to teach sailing at the basic level," said Severide. "The main reason for all the interest is the new lasers."

The lasers are 14-foot-long, single-sail boats which are more complicated than the mini-sails and they are designed to be used for racing.

"With the lasers, interest in the club is up considerably," said Severide.

The club also discovered there was more interest when the boats were moved from Cadboro Bay to proper facilities at Oak Bay Marina.

Severide was busy last week evaluating sailors to ensure that novices were not sent out in the lasers before they are competent.

The club's sailing team will likely be larger and of a higher quality than last year, said Severide.

He explained that each year eight to 10 regattas are held for Canadian universities and for those in Washington State.

UVic competes in the Northwest District which includes teams from UBC, SFU, Pearson College and Royal Roads.

The first regatta this year is Oct. 11 and 12 in Washington. In addition to local regattas, this is the Canadian Yachting Association and the B.C. Yachting Association are sponsoring a B.C. team to go to the Canadian Intercollegiate Sailing Championships.

Elimination competitions will be held this month between UBC, UVic and SFU. Because of the increased interest in sailing at UVic Severide said there would probably have to be a local sail off here to pick a team for the regattas.

He said anyone interested in obtaining activity cards for sailing or in joining an instructional class can obtain information from the athletics and recreational services office in the McKinnon Centre.

Anyone interested in sailing club activities can attend a meeting Wednesdays at 12:30 p.m. in Room 106 of the Clearyheus Building.

---

### Music therapy workshop slated

A workshop in music therapy will be given on campus Oct. 29 and 30 under the sponsorship of the Department of Music and the Faculty of Education.

The workshop will be Nancy Brownie, of Edmonton, who holds a master of music education.

Sessions will discuss music, as a therapeutic technique, and for "self concept and social skills". Topics will also include "music and community health services", "personal creativity and the arts therapist", and "research in music therapy".

Sessions will be held in MacLaurin 203 from 4 to 5:30 p.m. Oct. 29, and from 9:30 a.m. to noon Oct. 30.

Brownie is at present establishing a private music therapy practice in Edmonton, offering her expertise to individuals, institutions, and community agencies.

Music therapy programs are offered by universities in England and the U.S. and are just being introduced in Canada.

Those interested in attending the workshop can contact Vaughan at local #962.

---

### LATE INFLUX JACKS UP ENROLMENT

An influx of late registrations has brought the total undergraduate student population to within 24 students of last year.

At the end of late registration this year there were 7,112 undergraduate students at UVic, compared to 7,136 at the same time in 1975.

The total enrolment is, however, far short of an anticipated five per cent increase from last year.

Administrative Registrar Gordon Smiley pointed out that while the total undergraduate enrolment is close to last year's total there are now as many full-time students.

This year there are 5,368 full-time undergraduates, compared to 5,484 in 1975. There are 1,744 part-time students, up 92 from the same time last year.

Smiley added that first-year enrolment is down 260 from 1975. "This is a factor built into the system which will be felt in future years," he said.

While first-year enrolment is down, there are 60 students enrolled in new programs in Nursing and Social Welfare which began this year, and an additional 44 Law students because of second-year courses this year.

### It's a night for star-gazers

It's a night for star-gazers at the university tonight (Oct. 20) will tap into the enthusiasm of star-gazers.

The occasion is the official opening of the Department of Physics' new 20-inch telescope mounted in the observatory dome atop the Elliott Building.

UVic astronomer, Dr. Colin Scarfe, said that if the skies are clear the 150 guests invited to the reception in the Elliott Building will be able to climb up the observatory for a look-through the Cassegrain reflecting telescope.

The $43,500 telescope was installed in with a 10-inch Schmidt into a smaller nearby rooftop observatory, which reopens faculty and students now have three telescopes to use.

Among those invited to the reception tonight are delegates to a special symposium being held in honor of Dr. K.O. Wright, retiring director of the Dominion Astrophysical Observatory, who Wright is also a member of UVic's Senate.

Other guests include UVic astronomy students, Physics Department faculty, senior administrators, and representatives from the media.
A Harperstick recital

A recital called “Music for One and Two Harpersticks” featuring Erich Schwandt of UVic’s Music Department and Natalie Jenne of Concordia College, Illinois, will be held Oct. 30 at 8 p.m. in MacLaurin 144.

This is a repeat of a recital held in July by the two harpsichordists at St. Andrews Church in Victoria. The recital is arranged by works for François Couperin, Wilhelm Friedemann Bach, Carl Philip Emmanuel Bach and J.S. Bach.

Both Erich Schwandt and Natalie Jenne are at Stanford with the late harpsichord authority, Putnam Aldrich.

Their recital in July said they “proved to be excellent soloists and in the duet they were well matched.”

Schwandt taught at Stanford and the Eastman School of Music before coming to UVic in 1976.

Three contest Senate seat

Three members of the Faculty of Arts and Science are contesting a vacant seat on Senate.

Dr. Marilyn O’Toole (Anthropology), Dr. John Greene (French) and Dr. Thomas Hess (Linguistics) are running for the seat which was vacated by Dr. John Simpson of the Faculty of Humanities. The race is for the seat held by Dr. John Woods (Philosophy) who is now the Dean of Humanities at the University of Victoria.

The countings of the ballots will take place Nov. 2.

All under way is an election among students to fill one vacancy on the Board of Governors and two on the Senate.

Next year’s election will determine which seat which student senator and governor Paula DeBeck resigned. The student senator, Elspeth Heeren, representing the Faculty of Fine Arts, has notified the candidates that her group of students elected will finish one term years.
Facility staff get vote

Voting privileges in facility meetings have been granted to facility staff holding administrative and academic professional appointments within the Faculty of Fine Arts.

Student representatives have also been given voting privileges in all facility Fine Arts meetings.

A similar motion was ratified by Senate in October, 1975 but was made effective for 1975-76 only. Dr. Peter Smith, Dean of Fine Arts, explained that the Faculty now wished to grant speaking, and voting privileges indefinitely to staff and student representatives.

The Arts is the first Facility to extend voting privileges to full-time administrative and professional staff. Wednesday, October 20th
